

Private intelligence. On your terms.

Undergrove is a private AI workspace in development for independent builders and researchers who want useful AI with clear choices about their knowledge and data.

Built today

A brand system, cinematic website and responsive workspace. Conversations use scripted replies held in tab memory. File inputs read names, sizes and types only.

Proposed first release

One licensed open-weight model on a declared hosting route. The first design allows the gateway and model worker to process content. Those boundaries must be disclosed.

Product focus

Venice already offers private AI. Undergrove's proposed focus is sustained work, user-controlled knowledge and clear data choices for each model. Demand still needs validation.

Evidence to earn

Useful task completion, understandable privacy choices, tested retention and deletion, reliable service and measured cost per completed task. Pricing follows that evidence.

Competitive context: venice.ai/privacy, checked 19 October 2026.

NEXT MILESTONE

A live alpha people can use and understand.
